

The flexible, workflow-focused retail back-office software package for improved site profitability.

**eurodata edbos** provides user friendly tools to support diverse retailers of goods and services in the efficient management of all key business processes.

Located at outlet level, it can be connected to **eurodata edpos** or third party POS systems, or to a centralised network using **eurodata's** head office solution, **edhos**.

**edbos** is international and multilingual and runs on any standard Windows PC. It can be purchased in modules, enabling retailers to evolve scale and functionality at their own pace and without compromise.

Powerful item, supply chain and promotion management deliver improvements in outlet performance.

With one of Europe's leading retail software specialists behind it, **edbos** is reliable, scalable, flexible, data-rich and easy to install and use. **eurodata edbos** is the profitable solution to back-office management.

**Profitable.** Software solutions should aim to help customers reduce cost and increase revenues. As well as a focus on workflow efficiency, **edbos** delivers the key information on which the outlet can make the right decisions to improve profitability.

**Flexible.** We think you want to buy only what you need, so edbos comes in modules that you can purchase individually. Add-ons are available to meet the specific needs of convenience stores, service stations, food service and fast-fit vehicle service centres. edbos can also be easily set up for single independent sites or as an outlet in a centralised network.

**Workflow-focused.** With over 40 years of listening to our retail customers across Europe, we understand your work and how to make it most efficient.

We have designed **edbos** to support all key business processes, in particular to optimise item margin and stock analysis, maximise supply chain management, rationalise admin and accounting, and deliver extensive data on which outlet performance decisions can be made.

**Item management** lies at the heart of **edbos**. Among many other key features, our powerful database has a range of item typologies and extensive set up options for multiple item records, allowing detailed, theoretical and real item-by-item stock and margin analysis.

**Supplier management** enables extensive supplier coding, order and delivery planning, and processing and monitoring of supplier payments.

**Supply chain management** is sophisticated and powerful and allows multiple order, receiving and invoicing methods, including automatic matching and exception reporting

**Stock management** includes efficient stock-taking with time stamp, and administration and monitoring of internal consumption, transfers and write-offs. Reports aim to optimise stock levels.

**A special PDA module** supports multiple business processes such as ordering, receiving goods, stock-taking, price check, label ordering and write-offs.

**Price and promotion management** includes a labelling module and the ability to manage multiple promotions based on both discounted and free product.

**edbos** also supports in-house and third party loyalty programmes.

**Local Account management** supports invoicing discounts, customer group discounts, down-payments and surety payments, payment monitoring and reminder management.

**Statistics.** **edbos** offers an extensive range of fast and easy data for measurement and decision making.

Further modules include **operational and personnel management and financial management and pre-accounting**.

There is a powerful special add-on for **fast-fit vehicle service centres** and one specifically for **service stations** which includes fuel management. By intelligent back-office connection to the petrol pump controller, the **fuel management** module processes data from tanks, pumps and nozzles, with pricing for fuels now to 3 decimal places. **edbos** enables complete supply chain management of fuels in the same way as for non-fuels. **eurodata leads the market in service station software.**

**Well supported** through our telephone assistance service. This features remote maintenance and is tailored to meet individual customer needs.

**See edbos in practice.**

Talk to our customers. Ask for a demonstration. Please call your local contact or e-mail:
